Gallium nitride (GaN) is a next-generation semiconductor technology that runs up to 20x faster than legacy silicon chips. Navitas' proprietary GaN power ICs integrate GaN power (FET) and GaN drive plus control and protection in a single SMT package. These GaNFast™ power ICs become easy-to-use, high-speed, high-performance 'digital-in, power-out' building blocks and deliver up to 3x faster charging in half the size and weight, and with up to 40% energy savings compared with earlier silicon solutions.

"With over 140 customer GaN chargers in production, and over 130 patents issued and pending, we believe we have created a multi-year, highly-protected lead for Navitas," noted Sheridan. "We're off to a great start, and ready to tap into a \$13 billion GaN electrification opportunity that goes far beyond chargers and adapters, and into data centers, renewable with a focus on solar, plus electric vehicle and the broader e-mobility segments."

Navitas has already shipped over 24M GaNFast power ICs to tier-1 companies including Dell, Lenovo, Xiaomi, LG, OPPO and more. Navitas estimates that each GaN power IC shipped saves 4 kg of CO₂ emissions, and that GaN can impact up to 2.6 Gtons of CO₂ reduction annually by 2050.
